

CASE STUDY

XP SCHOOL TRUST, DONCASTER. (Educational Premises)

OBJECTIVES

We were tasked to carry out a fire risk assessment of XP School back in 2019.

Taking over from a previous provider we would look to assess the building itself, look at the current control measures and make recommendations where necessary.

SOLUTION

A comprehensive assessment was carried out in which we performed a thorough audit of the school and the current fire safety measures and documentation was reviewed.

An action plan was produced for the school and further assistance provided in implementing some of the policies & procedures raised in the assessment was provided to them.

OUTCOME

The school had an up to date fire risk assessment in place and the overall fire safety policy was expanded on to produce a more suitable document for the school.

As the school was a new build there were a few issues with the passive fire protection & fire doors which was also addressed & subsequently rectified.

The assessment then led to us carrying out fire risk assessments for the entire trust.

AT A GLANCE

CHALLENGES

- Educational premises
- Basic fire safety policy
- Issues with some fire doors

OUTCOME

- Up to date fire risk assessment
- Updated thorough fire policy
- Policies & procedures updated
- Issues with fire doors rectified
- Passive fire protection issues rectified.

VERIFIED REVIEW

"James has been a great asset to XP School Trust.

He has completed thorough Fire Risk Assessments for all our schools and has been amazing with other fire related queries that we've had."
